SUMMARY

Senior frontend engineer with eight years across design systems, consumer web products, and platform tooling. Acting tech lead for the Phoenix Design System at Intrepid Travel, owning architecture, component API design, release strategy, design system governance, and quarterly roadmap across three product teams. Currently leading a migration of Phoenix from a single-brand library into a layered, white-label architecture built for theming and cleaner cross-team distribution. Also built the Figma token sync pipeline and is developing an MCP server that surfaces Phoenix component and token rules to AI coding assistants.

Sole owner of the intrepid.com frontend, delivered end to end across stack selection, CMS, analytics, SEO, accessibility, and performance. Two-time internal hackathon winner with both projects shipped to production. R&D AI lead, with a strong focus on accessibility (a11y), Core Web Vitals, and mentoring.

SKILLS

Frontend: Vue 3, React, TypeScript, JavaScript (ES6+), Next.js, Nuxt, SCSS, CSS Custom Properties, Design Tokens, HTML5, CSS3

Design Systems: Component Libraries, Component API Design, Storybook, Figma Code Connect, Figma Variables API, Design Tokens, Token Pipelines, White-label Theming, Design System Governance, Monorepo Architecture, Cross-team Adoption

AI and Tooling: MCP Server Development, AI Skill Authoring, GitHub Copilot Instruction Authoring, n8n Workflow Automation

Performance: Core Web Vitals (LCP, CLS, INP), Lighthouse CI, Bundle Optimisation, Code Splitting, Lazy Loading, Critical Rendering Path

Testing: Cypress, Playwright, Jest, Vitest, React Testing Library, Visual Regression Testing, Axe Accessibility

Backend and APIs: Node.js, REST APIs, GraphQL, MongoDB, PostgreSQL

Cloud and DevOps: GitHub Actions, AWS Lambda, AWS S3, CI/CD Pipelines, Chromatic, Sentry

Accessibility: WCAG 2.1 AA, Accessibility (a11y), Axe, Screen Reader Support, Keyboard Navigation

Ways of Working: Agile, Scrum, Mentoring, Stakeholder Management, Technical Leadership, Code Review

Other: SEO, Contentstack CMS, Tealium Tag Manager, Responsive Design, Figma

WORK EXPERIENCE

Senior Software Engineer / Acting Tech Lead, Design Systems

March 2024 to Present

Intrepid Travel | Melbourne, VIC

- Technical owner of Phoenix, a Vue 3 and TypeScript component library of 60+ components built on SCSS design tokens, shipped to three product teams through versioned Git tags. Own every architecture decision, component API, and the release strategy.
- Lead the migration of Phoenix from a single-brand, website-coupled setup into a layered architecture that separates core primitives, theme tokens, and composed components. Enables white-label theming, real tree shaking, and cleaner multi-team distribution. Proof of concepts complete; scoping rollout and time allocation with tech leads and PMs.
- Built a token sync pipeline between Figma and code using Figma Code Connect and the Variables API, flowing design tokens from Figma into the codebase and linking component stories to their Figma source for accurate design-to-code handoff across the engineering org.
- Developing a Phoenix MCP server backed by a machine-readable PHOENIX-TOKENS.json artefact, exposing component APIs, design tokens, and anti-patterns to AI coding assistants so engineering, website, and non-technical brand teams build on-brand with AI assistance.

- Designed and shipped an automated release pipeline that replaced a fully manual process: CLI scripts for release:start and release:finish, semver enforcement, changelog formatting, and GitHub Actions CI/CD workflows for validation and npm publish.
- Sole owner of the intrepid.com frontend, delivered from zero to production independently. Covered stack selection, Contentstack CMS integration, Tealium data layer, live Trustpilot API, a Vimeo video hero with retry and error handling, scroll-spy sticky navigation, full SEO audit and fixes, and Lighthouse performance tuning.
- Led the reskin of the trip page, the highest-traffic page on the consumer booking platform, migrating it to Phoenix components in stages across desktop and mobile. Closed 30+ QA fixes with zero regression to the booking flow.
- Built Playwright visual regression testing from scratch, solving cross-platform baseline divergence between macOS and Linux, integrating Percy for visual diffing, and sharding across four parallel CI runners. Added automated axe accessibility (a11y) scanning on every component with a PR-comment violation reporter.
- Authored Cypress integration tests for all 40+ components from zero, establishing the team's primary regression safety net across the full component surface.
- Migrated Storybook to v7 on Vite with CI/CD publishing through Chromatic, and documented colours, typography, icons, illustrations, shadows, and layouts. Onboarded 10+ engineers through structured sessions, cutting ramp-up time by roughly 35 percent.
- Ran structured technical evaluations of Tailwind CSS v4 and UnoCSS as SCSS alternatives, migrating sample components, building bundle-size and build-time measurement tooling, and delivering a decision-ready Storybook dashboard with a clear recommendation.
- Audited the card component family across all consumer apps and consolidated 8 variants to 4, backed by a detailed consumer-usage analysis, improving component API consistency and maintainability.
- Won first place in two consecutive internal hackathons: an AI-powered customer review search tool, then a full sister-company website built in 48 hours. Both shipped to production. Holds the R&D AI lead role for the team.
- Mentor and manage one peer engineer. Conducted technical interviews for 30+ candidates globally and hired one senior engineer who became a core contributor. Work in an Agile delivery environment with cross-functional stakeholders.

Full Stack Developer

January 2022 to January 2024

AmazingCo | Melbourne, VIC

- Owned frontend work across subscription UI, collections pages, calendar scheduling, wishlist, and gift-card PDF generation, using React, Redux, TypeScript, and Next.js. Engagement grew 30 percent over the period.
- Integrated five payment methods: Google Pay, Apple Pay, Afterpay, PayPal, and Stripe. wired Sentry error tracking and GA4 funnels into each flow, lifting checkout success 25 percent.
- Grew organic traffic 20 percent through dynamic XML sitemaps on AWS Lambda and server-side rendering improvements, tracking Core Web Vitals on Lighthouse dashboards to hold performance budgets.
- Converted Figma mockups into responsive, accessible (a11y) interfaces meeting WCAG 2.1 AA. Mobile retention rose 15 percent.
- Connected Twilio, Mailchimp, and Auth0, and built REST and early GraphQL integrations that tightened data flow between frontend and backend. Adoption rose 18 percent.
- Made Jest and Cypress the team testing standard. Bug reports fell 35 percent.

Frontend Web Developer

June 2017 to January 2022

Nookal | Melbourne, VIC

- Led the frontend move from vanilla JavaScript to React, bringing in component architecture and Jest testing. Revenue grew roughly 1.5x in the years that followed.
- Worked with the lead designer for four years on a shared component library. The early token conventions we set there shaped how I have approached design systems since.
- Brought Core Web Vitals data and user-flow analytics into stakeholder conversations and turned the numbers into roadmap input.
- Kept code cross-browser compatible and accessible across several concurrent projects, tracked in Bitbucket, JIRA, and Trello.

EDUCATION

Master of Science in Information Technology | RMIT University, Melbourne, VIC

Bachelor of Science in Information Technology | Ganpat University, Ahmedabad, India
