01 / summary

Senior frontend engineer with eight years across design systems, consumer web products, and platform tooling. Acting tech lead for design systems at Intrepid Travel: owner of Phoenix (the company's design system) and architect of Compass (its greenfield successor), covering architecture, component API design, token pipelines, release strategy, and governance, with major decisions worked through openly with engineers, designers, and PMs across three product teams. Built the Figma token sync pipeline and an MCP server that gives AI coding assistants access to component and token rules.

Sole owner of the intrepid.com frontend, delivered end to end while partnering with design, content, and marketing on CMS, analytics, SEO, accessibility, and performance. Two-time internal hackathon winner, both projects shipped to production. Strong focus on customer outcomes, accessibility (a11y), Core Web Vitals, and modern frontend testing across integration testing and end-to-end browser testing.

02 / skills

--frontend: Vue.js (Vue 3), React, TypeScript, JavaScript (ES6+), Next.js, Nuxt, Tailwind CSS, SCSS, CSS Custom Properties, Design Tokens, HTML5, CSS3, Modern Browser Standards and APIs

--design-systems: Component Libraries, Component API Design, Storybook, Figma Code Connect, Figma Variables API, Token Pipelines, W3C DTSG Tokens, Style Dictionary, White-label Theming, Design System Governance, Cross-team Adoption

--testing: Cypress, Playwright, Integration Testing, End-to-End Browser Testing, Jest, Vitest, React Testing Library, Visual Regression Testing, Axe Accessibility

--performance: Core Web Vitals (LCP, CLS, INP), Lighthouse CI, Bundle Optimisation, Code Splitting, Lazy Loading, Critical Rendering Path

--tooling-infra: Vite, Turborepo, pnpm Workspaces, GitHub Actions, CI/CD Pipelines, Chromatic, Sentry, AWS Lambda, AWS S3, Monorepo Architecture, npm Publishing

--ai-automation: MCP Server Development, AI Skill Authoring, GitHub Copilot Instruction Authoring, n8n Workflow Automation

--backend-apis: Node.js, REST APIs, GraphQL, MongoDB, PostgreSQL

--accessibility: WCAG 2.1 AA, Axe, Screen Reader Support, Keyboard Navigation

--ways-of-working: Technical Leadership, Design System Governance, Lean Delivery, Customer Collaboration, Cross-functional Teams, Mentoring, Code Review, Stakeholder Management

--other: SEO, Contentstack CMS, Tealium Tag Manager, Responsive Design, Figma

03 / work experience

Senior Software Engineer / Acting Tech Lead, Design Systems

Mar 2024 - Present

Intrepid Travel | Melbourne, VIC

- **Technical owner of Phoenix**, a Vue 3 and TypeScript component library of 60+ components on SCSS design tokens, shipped to three product teams through versioned Git tags. Own the architecture, component APIs, and release strategy.
- **Architected Compass from an empty repository**: pnpm and Turborepo monorepo, seven Architecture Decision Records, and a W3C DTSG token pipeline (Style Dictionary) compiling one source of truth into CSS custom properties, typed JavaScript, JSON, and a Tailwind v4 theme. Direct the two-track design and engineering build.
- **Built the Figma-to-code token sync**: a private Figma plugin exporting Variables without an Enterprise licence, plus a CI job that raises a token pull request only when values change. Figma is now the source of truth for brand tokens.
- **Developing a Phoenix MCP server** backed by a machine-readable PHOENIX-TOKENS.json artefact, exposing component APIs, design tokens, and anti-patterns to AI coding assistants for engineering and non-technical brand teams.
- **Shipped an automated release pipeline** replacing a fully manual process: release CLI scripts, semver enforcement, changelog formatting, and GitHub Actions validation and npm publish.
- **Sole owner of the intrepid.com frontend**, zero to production: Contentstack CMS, Tealium data layer, live Trustpilot API, a Vimeo video hero with retry handling, scroll-spy sticky navigation, and full SEO and Lighthouse tuning.
- **Led the trip page reskin**, the highest-traffic page on the consumer booking platform, migrating it to Phoenix components across desktop and mobile. Closed 30+ QA fixes with zero regression to the booking flow.
- **Built the testing safety net from zero**: Playwright visual regression with Percy across four sharded CI runners, Cypress integration tests for all 40+ components, and automated axe accessibility scanning with a PR-comment violation reporter.

- **Migrated Storybook to v7 on Vite** with Chromatic CI/CD publishing and full foundation documentation. Onboarded 10+ engineers through structured sessions, cutting ramp-up time roughly 35 percent.
- **Ran CSS architecture evaluations** of Tailwind CSS v4 and UnoCSS with bundle-size and build-time measurement tooling, and consolidated the card family from 8 variants to 4 backed by consumer-usage analysis.
- **Removed the legacy component framework** from the design system and its downstream consumer app, fixing 10 correctness bugs in the automated migration tooling.
- **Authored 13 knowledge-base pages and two cross-repo audits** (design-token usage across 8 repos, a Python component-usage scanner across 3 apps), giving three product teams decision-ready direction for the design system migration.
- **Won two consecutive internal hackathons:** an AI-powered customer review search tool, then a full sister-company website built in 48 hours. Both shipped to production. Holds the R&D AI lead role for the team.
- **Mentor one engineer and hire for the team:** interviewed 30+ candidates globally and hired a senior engineer who became a core contributor.

Full Stack Developer

Jan 2022 - Jan 2024

AmazingCo | Melbourne, VIC

- Owned frontend work across subscription UI, collections pages, calendar scheduling, wishlist, and gift-card PDF generation, using React, Redux, TypeScript, and Next.js. Engagement grew 30 percent over the period.
- Integrated five payment methods: Google Pay, Apple Pay, Afterpay, PayPal, and Stripe. Wired Sentry error tracking and GA4 funnels into each flow, lifting checkout success 25 percent.
- Grew organic traffic 20 percent through dynamic XML sitemaps on AWS Lambda and server-side rendering improvements, tracking Core Web Vitals on Lighthouse dashboards to hold performance budgets.
- Converted Figma mockups into responsive, accessible (a11y) interfaces meeting WCAG 2.1 AA. Mobile retention rose 15 percent.
- Connected Twilio, Mailchimp, and Auth0, and built REST and early GraphQL integrations that tightened data flow between frontend and backend. Adoption rose 18 percent.
- Made Jest and Cypress the team testing standard. Bug reports fell 35 percent.

Frontend Web Developer

Jun 2017 - Jan 2022

Nookal | Melbourne, VIC

- Led the frontend move from vanilla JavaScript to React, bringing in component architecture and Jest testing. Revenue grew roughly 1.5x in the years that followed.
- Worked with the lead designer for four years on a shared component library. The early token conventions we set there shaped how I have approached design systems since.
- Brought Core Web Vitals data and user-flow analytics into stakeholder conversations and turned the numbers into roadmap input.
- Kept code cross-browser compatible and accessible across several concurrent projects, tracked in Bitbucket, JIRA, and Trello.

04 / education

Master of Science in Information Technology | RMIT University, Melbourne, VIC

Bachelor of Science in Information Technology | Ganpat University, Ahmedabad, India
